The initiative promoted by Deloitte, Grupo Promerica and INCAE Business School recognizes and awards Sistemas y Proyectos as one of the best Central American companies.

Programs

We are proud to have the most valuable resources; that is, highly trained, certified and professional personnel in the industry. In addition, we have our own programs to train electromechanical technicians and forklift operators, using the learning platforms of the highest tier suppliers.

Crown Demonstrated Performance

We have several certified programs for both internal and external customers, training electromechanical technicians and forklift operators about safe operation of equipment in distribution centers.

Crown Integrity Service & Parts

Our service performance system is based on the Crown Integrity program to optimize the service lifecycle of the equipment we work with.

OSHA Evaluation of Safety Standards

Dedicated program to evaluate equipment safety standards and storage systems capacities inside the distribution center.

Total Forklift Parts & Accesories

The most complete program for quality forklift parts and accessories for more than 50 brands of material handling equipment.

Social responsibility

As a company and a benchmark in the Guatemalan industry, we are committed to generate long-term commercial relationships with certified quality products and services that are socially and environmentally responsible. Our processes are designed to attract, train, and promote the highest standards of merit, competence and values.

(www.puentebelice.org)

Futuro Vivo + SAMAC

A primary and secondary school for children with music, art, sports, and other programs. (www.futurovivoguatemala.org)

Environmental responsibility

The correct use of transformed resources and waste generated is a fundamental value of the company and part of our commitment to environmental responsibility.

Proper recycling and reuse of industrial oils

Careful collection and use of industrial oils for reprocessing with responsible companies.

Moderate use of plastics for packaging and logistics

We use new ways to transport and protect our customers' precious merchandise.

Recycling of electronic equipment, paper, aluminum, and glass

Committed to the environment, we act in such a way that we seek to take advantage of the reuse of waste generated at our facilities with responsible recyclers.

Sustainable disposal of industrial lead-acid batteries

Battery acid is properly neutralized and then the lead cells are recycled through a commercial battery manufacturer.

Wastewater treatment

Our factory has a state-of-the-art system for the correct treatment of wastewater.

Recycling of metallic components

Scrap from manufacturing is properly stored and then recycled for reuse.
